-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 December 2000.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-34 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-6,8,10-31 and 33 is/are rejected.
- 7) ☒ Claim(s) 7,9,32 and 34 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- ☒ Notice of References Cited (PTO-892)
- ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date 4.
- ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- ☐ Notice of Informal Patent Application (PTO-152)
- ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. **Claims 1-3, 6, 14, 15, 16, 22-24, 26-28, 31** are rejected under 35 U.S.C. 102(b) as being anticipated by Iwakiri et al. (US 5,509,020) (hereinafter Iwakiri).

Regarding claim 1, Iwakiri teaches the following:

“supplying ... decision block” (Figure 1, combination of elements 3-8, 10);

“said rate decision ... desired condition” (Figure 3; Col. 6, line 13 to Col. 7, line 44); wherein Iwakiri implies “determining a plurality of frame energies” through the estimation of E_b/N_0 . That is, each transmitted data rate has a corresponding energy associated with that particular data rate. The transmitted energy is also varied proportionally with the data rate. Therefore, estimating the E_b/N_0 is a representation of “determining” “of frame energies”.

Regarding claim 26, see claim 1 above.

Regarding claim 2, Iwakiri further teaches the claimed subject matter “wherein ... Viterbi decoder” in Figure 1, element 1.

Regarding claim 27, see claim 2 above.

Regarding claim 3, Iwakiri further teaches the claimed subject matter “wherein ... eight rate” in Figure 2D.

Regarding claim 28, see claim 3 above.

Regarding claim 6, Iwakiri further teaches the claimed subject matter “wherein ... threshold energy” in Col. 3, lines 18-36; Col. 6, line 35 to Col. 7, line 3.

Regarding claim 31, see claim 6 above.

Regarding claim 14, Iwakiri teaches the following:

“receiving a sequence of code symbol” (Figure 1, elements 1, 2);

“determining a plurality of CRC ... frame rates” (Figure 2D; Col. 5, lines 8-48);

“determining ... frame energies” (Figure 3; Col. 6, line 13 to Col. 7, line 44);

wherein Iwakiri implies “determining a plurality of frame energies” through the estimation of E_b/N_0 . That is, each transmitted data rate has a corresponding energy associated with that particular data rate. The transmitted energy is also varied proportionally with the data rate. Therefore, estimating the E_b/N_0 is a representation of “determining” “of frame energies”.

Regarding claim 15, Iwakiri further teaches the claimed subject matter “wherein ... Viterbi decoder” in Figure 1, element 1.

Regarding claim 16, Iwakiri further teaches the claimed subject matter “wherein ... eight rate” in Figure 2D.

Regarding claim 22, Iwakiri teaches the following:

“receiving a sequence of code symbol” (Figure 1, elements 1, 2);

“determining a plurality of re-encoded ... frame rates” (Figure 1, element 5; Col. 5, lines 45-67);

"determining ... frame energies" (Figure 3; Col. 6, line 13 to Col. 7, line 44); wherein Iwakiri implies "determining a plurality of frame energies" through the estimation of Eb/No. That is, each transmitted data rate has a corresponding energy associated with that particular data rate. The transmitted energy is also varied proportionally with the data rate. Therefore, estimating the Eb/No is a representation of "determining" "of frame energies".

Regarding claim 23, Iwakiri further teaches the claimed subject matter "wherein ... Viterbi decoder" in Figure 1, element 1.

Regarding claim 24, Iwakiri further teaches the claimed subject matter "wherein ... eighth rate" in Figure 2D.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 4, 17, 25, 29** are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwakiri.

Regarding claim 4, the claimed subject matter "wherein ... eighth rate" would have been obvious to one skilled in the art in that, other rate could have been used without departing from the scope of Iwakiri; and that if no data is transmitted, the result should yield a zero rate.

Regarding claim 17, see claim 4 above.

Regarding claim 25, see claim 4 above.

Regarding claim 29, see claim 1 above.

5. **Claims 5, 8, 30, 33**, are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwakiri in view of Burshtein (US 6,560,744).

Regarding claim 5, Iwakiri teaches all the claimed subject matter in claim 5 as stated above, except for the claimed subject matter "wherein ... desired condition". Burshtein, in the same field of endeavor, teaches the utilization of a pilot energy is known in the art (Col. 10, line 58-60). Thus, the combination of the utilization of the pilot energy taught by Burshtein into Iwakiri would have been optional to one skilled in the art.

Regarding claim 8, similarly to claim 5 above (Burshtein, Col. 10, line 31 to Col. 11, line 58).

Regarding claim 30, see claim 5 above.

Regarding claim 33, see claim 8 above.

6. **Claims 10-13, 18-21** are rejected under 35 U.S.C. 103(a) as being unpatentable over Iwakiri in view of Guey (US 6,480,556).

Regarding claim 18, Iwakiri teaches the following:

"receiving a sequence of code symbol" (Figure 1, elements 1, 2);

"determining a plurality of frame energies ... frame rates" "determining in final ... based on" "said plurality of frame energies" (Figure 3; Col. 6, line 13 to Col. 7, line 44); wherein Iwakiri implies "determining a plurality of frame energies" through the estimation

Art Unit: 2634

of Eb/No. That is, each transmitted data rate has a corresponding energy associated with that particular data rate. The transmitted energy is also varied proportionally with the data rate. Therefore, estimating the Eb/No is a representation of "determining" "of frame energies".

Iwakiri differs from the claimed invention in that Iwakiri doesn't teach "determining a plurality of Yamamoto quality ... frame rates". However, such use of the Yamamoto quality in rate detection is known in the art (Guey, Col. 1, lines 58-65). Therefore, the claimed subject matter "determining a plurality of Yamamoto quality ... frame rates" and use that result for making final decision would have been optional to one skilled in the art.

Regarding claim 19, Iwakiri further teaches the claimed subject matter "wherein ... Viterbi decoder" in Figure 1, element 1.

Regarding claim 20, Iwakiri further teaches the claimed subject matter "wherein ... eight rate" in Figure 2D.

Regarding claim 21, the claimed subject matter "wherein ... eighth rate" would have been obvious to one skilled in the art in that, other rate could have been used without departing from the scope of Iwakiri; and that if no data is transmitted, the result should yield a zero rate.

Regarding claim 10, Iwakiri teaches:

"receiving a sequence of code symbol" (Figure 1, elements 1, 2);

"determining a plurality of CRC ... fame rates" (Figure 2D; Col. 5, lines 8-48);

Art Unit: 2634

“determining a plurality of re-encoded ... frame rates” (Figure 1, element 5; Col. 5, lines 45-67);

“determining ... frame energies” (Figure 3; Col. 6, line 13 to Col. 7, line 44); wherein Iwakiri implies “determining a plurality of frame energies” through the estimation of E_b/N_0 . That is, each transmitted data rate has a corresponding energy associated with that particular data rate. The transmitted energy is also varied proportionally with the data rate. Therefore, estimating the E_b/N_0 is a representation of “determining” “of frame energies”.

Iwakiri differs from the claimed invention in that Iwakiri doesn't teach “determining a plurality of Yamamoto quality ... frame rates”. However, such use of the Yamamoto quality in rate detection is known in the art (Guey, Col. 1, lines 58-65). Therefore, the claimed subject matter “determining a plurality of Yamamoto quality ... frame rates” and use that result for making final decision would have been optional to one skilled in the art.

Regarding claim 11, Iwakiri further teaches the claimed subject matter “wherein ... Viterbi decoder” in Figure 1, element 1.

Regarding claim 12, Iwakiri further teaches the claimed subject matter “wherein ... eight rate” in Figure 2D.

Regarding claim 13, the claimed subject matter “wherein ... eighth rate” would have been obvious to one skilled in the art in that, other rate could have been used without departing from the scope of Iwakiri; and that if no data is transmitted, the result should yield a zero rate.

Allowable Subject Matter

7. **Claims 7, 9, 32, 34** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Chen et al. (US 6,687,233) disclose a Rate Detection In Direct Sequence Code Division Multiple Access Systems.

Kuroiwa et al. (US 6,639,954) disclose a Mobile Communication Terminal And Transmission –Bit-Rate Detection Method.

Czaja (US 5,796,757) discloses Methods And Apparatus For Performing Rae Determination With A Variable Rate Viterbi Decoder.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dac V. Ha whose telephone number is 703-306-5536. The examiner can normally be reached on 5/4.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
